Star is an application to help users store, retrieve and manage web articles with the help of time, keyword, filters and location. They can save, retrieve, share or read those articles they find on the internet for later. People don't have enough time to read articles, they can save it and retrieve it for later reading. If they are interested in a particular article and want to share with their friends, Star helps them to do it.

So when was the last time you had a hard time finding your reliable article! Forget It! Because ⭐Star is here!
